singhprashant2403@gmail.com ◇ [LinkedIn](#) ◇ [GitHub](#)

PROFESSIONAL SUMMARY

Postgraduate student pursuing a Master's in Computer and Information Sciences at Auckland University of Technology, with a strong foundation in cloud engineering and automation. Proficient in Python and SQL, with hands-on experience building scalable infrastructure and deployment pipelines gained through a part-time Cloud Engineer role alongside full-time study. Comfortable leveraging AI-assisted coding tools to accelerate delivery on assigned tasks, alongside a solid foundation in writing clean, maintainable code and troubleshooting distributed systems. Eager to bring this foundation into a graduate role in New Zealand and continue growing my cloud computing skills within a collaborative engineering team.

SKILLS

- **Programming & Development:** Python, SQL, Bash
- **Cloud & DevOps:** AWS (EC2, S3, IAM, VPC, RDS, EventBridge), Terraform, Docker, CI/CD (GitHub Actions, Bitbucket Pipelines)
- **AI-Assisted Development:** Claude Sonnet, ChatGPT, GitHub Copilot, Prompt Engineering
- **Testing & Practices:** Unit Testing, Debugging, CI/CD Automation, Version Control (Git)
- **Systems & Tools:** Linux (Ubuntu), GitHub, Bitbucket, Jira, Zabbix Monitoring
- **Core Skills:** Problem Solving, Agile Methodologies, Team Collaboration, Communication

PROFESSIONAL EXPERIENCE

DevOps Consultant (*Part-Time*)

Orgate Limited

Aug 2025 – Present

Auckland, New Zealand

- Developed and maintained automation scripts and infrastructure-as-code using Terraform and Bash to streamline deployment workflows.
- Collaborated with developers and cross-functional teams to support application deployment, debugging, and system integration.
- Managed AWS-based environments (EC2, RDS, VPC, IAM), improving system performance, scalability, and reliability.
- Implemented monitoring and alerting solutions, enabling faster identification and resolution of system issues.
- Troubleshoot application and infrastructure issues across distributed systems, improving system stability.
- Contributed to Agile team processes, participating in collaborative problem-solving and continuous improvement.

DevOps Engineer (*Full-Time, Remote*)

Proxmed Pty Ltd

September 2024 – July 2025

Melbourne, Australia

- Built automation solutions using Python, Bash, and Terraform to deploy and manage 25+ cloud-based servers.
- Designed and optimized CI/CD pipelines, improving deployment efficiency by 50% and ensuring consistent software delivery.
- Collaborated with development teams to integrate application builds and deployments into CI/CD workflows.
- Debugged and resolved system, deployment, and runtime issues across cloud-based applications.
- Managed containerized environments using Docker to support scalable and reliable application deployments.
- Analysed system performance and implemented optimization strategies, reducing infrastructure costs by 20%.
- Supported Agile delivery by working closely with cross-functional teams and adapting to evolving requirements.

ACHIEVEMENTS

- Successfully migrated production AWS infrastructure from AWS CDK to Terraform within one week, leveraging AI-assisted development (Claude Sonnet) to accelerate code conversion, validation, and troubleshooting. Received appreciation from management for delivering the migration ahead of schedule while maintaining infrastructure reliability.
- Designed and implemented an automated scheduling solution for AWS EC2, RDS, and Amazon DocumentDB using AWS Lambda and Amazon EventBridge (Cron), enabling automatic start/stop of non-production resources and reducing cloud infrastructure costs by approximately **USD 400 per month**.

PROJECTS

Expert Finance – Mortgage Web Application ([Link](#))

- Developed a responsive mortgage web application using React.js and Next.js, leveraging ChatGPT Pro to accelerate UI development, code generation, and debugging.
- Built interactive features, including a loan repayment calculator, using JavaScript with a focus on maintainable and reusable components.
- Automated application deployment on AWS EC2 using Terraform, shell scripts, and CI/CD pipelines, enabling repeatable and reliable infrastructure provisioning.
- Configured and managed the Linux-based hosting environment, integrating infrastructure-as-code and deployment automation to streamline software delivery.
- Applied AI-assisted development practices alongside cloud engineering and DevOps workflows to improve development speed, deployment consistency, and overall productivity.

Zabbix Monitoring and Automation System ([Link](#))

- Implemented centralized monitoring to track system performance and improve operational visibility.
- Developed automation scripts to deploy monitoring agents across multiple servers.
- Designed alerting mechanisms to detect failures and improve incident response time.

Guacamole Remote Access System with SSO ([Link](#))

- Implemented secure remote access using OpenID Connect (OIDC) authentication.
- Configured backend services including Apache, Tomcat, and MySQL.
- Automated deployment and configuration processes to ensure consistent system setup.

EDUCATION

Master of Computer and Information Sciences	Expected 2026
Auckland University of Technology	
Current CGPA: 7.25/9.0 (<i>Grade: A-</i>)	
Ongoing Dissertation: Evaluating Effectiveness of LLM in Detecting Security Misconfigurations in Terraform IaC.	
Bachelor of Technology in Information Technology	2024
Manipal University Jaipur	
CGPA: 8.06/10.0 (<i>Grade: A-</i>)	

EXTRACURRICULAR ACTIVITIES

- Regular gym training and swimming, demonstrating discipline and consistency.
- Active badminton player, reflecting teamwork and collaboration.
